Give 40-acre subdivision on which works will be located, or locate by course and distance to a section-corner.
- (f) Point of return of water to stream Not to be returned  
Describe in same manner as point of diversion.
- (g) Remarks It is intended by this application to utilize the flood and other waters of the creek and its tributaries at all times of the year and thus benefit from the silt that it carries to the land; also it is intended to soak up the flood thoroughly and raise the water table to act as a reservoir to store water for the crop roots. This is necessary owing to the irregularity of the stream flow and due to the fact that the runoff comes earlier at times than the usually recognized irrigation season.

### DESCRIPTION OF PROPOSED WORKS

The works are practically constructed for this use of water.

State manner in which water is to be diverted, whether by dam or other works, whether through pipes, ditches, flumes, or other conduits. If water is to be stored in reservoirs, it should be so stated and the location of the reservoir should be given with reference to the legal subdivisions. Reference is made to permits of this applicant for the waters of the same stream. During flood times applicant desires to utilize the main channel of the creek so as to avoid washing the present ditch and silting it unnecessarily. By diverting from the main channel using it as a conveyor from the present ditch heading to the lands mentioned considerable repair work can be avoided. Applicant therefore appropriates the channel as a conveyor for the water. Suitable wood and rock dams will be built at the point of diversion.

5. Estimated cost of works \$500.00- Five Hundred Dollars.

6. Estimated time required to construct works Two years (2)

7. Remarks It is intended to utilize all the water of this source whenever available at any time <sup>for use of applicant</sup> of the year. The flood waters carry silt so as to level and fertilize the land when used as proposed.
